

SHOBHITHA SPANDANA S

+91 6360391879 | spanduspandu1828@gmail.com | www.linkedin.com/in/spandana-s-646a9126b | Bangalore, Karnataka

PROFESSIONAL OBJECTIVE

Software Developer with a strong foundation in application development and the full Software Development Life Cycle. Experienced in designing, coding, testing, debugging, and deploying reliable software solutions while translating user requirements into clear technical designs. Familiar with GUI development, UX principles, version control, and IT testing and support activities. Proactive problem solver with strong collaboration skills, eager to learn emerging technologies and contribute to building innovative banking solutions in a fast-paced, inclusive environment.

EDUCATION

Don Bosco Institute of Technology

Dec 2022 - Jun 2026

Bachelor of Engineering in Artificial Intelligence & Machine Learning

Bangaluru

8.82 CGPA

Courses: Data Structures & Algorithms, Machine Learning, Big Data, Blockchain, Cryptography, Data Base Management System

GV PU College

Jul 2020 - Apr 2022

Pre-University College

Davangere

82 Percentage

Courses: Physics, Chemistry, Mathematics, Biology

SKILLS

Programming Languages: Python, JavaScript, Java, C, C++

Web Technologies: HTML, CSS, REST APIs, JSON

Frameworks & Tools: Spring, Spring Boot, Git/GitHub, Docker, FastAPI, Streamlit, Postman, React

Core Computer Science: Data Structures and Algorithms (DSA)

Data Visualization & ML Tools (Basics): NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn

EXPERIENCE

Skill Intern, Bangalore, KAR

Jan 2025 - Mar 2025

Data Science Intern

- Processed and cleaned 50000 plus Uber ride records achieving a 95 percent improvement in data quality and reliability
- Built and applied K Means clustering and regression models to optimize driver allocation improving operational efficiency by 20 percent
- Analyzed rider demand patterns and user behavior to reduce customer wait times by 15 percent and enhance overall experience
- Conducted geospatial analysis to improve ETA accuracy by 25 percent and streamline driver routing and operations

PROJECTS

Luna AI –AI-Powered Video Understanding System | Don Bosco Institute of Technology

Jan 2025 - Nov 2025

- Engineered an AI-powered web application to analyze and interpret video content end-to-end.
- Integrated Whisper for transcription, YOLO for detection, Tesseract for OCR, and ChatGPT for natural language querying.
- Built using Python and Flask with real-time processing support for both YouTube links and uploaded videos.
- Integrated audio visual and text based intelligence to enable multimodal understanding and support real time interactive analysis.

Manufacturing Output Prediction (Linear Regression) | TNSIF

Oct 2025

- Built a machine learning model to predict manufacturing output using 400 records and 13 machine parameters.
- Performed data analysis, feature engineering, and compared Decision Tree, Random Forest, Logistic Regression, and SVM.
- Selected Random Forest as the best-performing model based on accuracy and evaluation metrics.
- Deployed the model using FastAPI and containerized it with Docker for real-time and portable use.

Heart Disease Detection (Classification) | TNSIF

Sep 2025

- Developed ML models to predict heart disease using a clinical dataset with 400 patient records.
- Conducted EDA, preprocessing, and feature selection to prepare high-quality input data.
- Compared multiple algorithms and finalized Random Forest for its strong diagnostic accuracy.
- Deployed the prediction system using FastAPI and Docker for easy, scalable access.
